Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The invention relates to a process for the continuous production of acetylene diurea by reacting glyoxal with urea in the presence of mineral acids. The process is carried out in at least one reactor having a mixing device wherein the reactants are continually fed and mechanically removing the acetylene diurea in the mother liquor and the latter is then recycled back into the reactor in whole or in part. The closest prior art is US Patent No. 2,731,472 to Reibnitz. US Patent `472 teach a process of preparing heterocyclic compounds by reacting glyoxal with urea. The process described in this application differ from the prior art in that acetylene diurea is continually prepared and the unreacted reagents are recycled back. The prior art failed to teach or suggest the continuous production of acetylene diurea as described in this application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
